

TRAC H₂O™ is changing the way people think about water treatment.

TRAC Ecological has made a name for itself in the industry by providing its customers with a safe and effective chemical means of scale removal. Through this median we have been exposed to countless numbers of systems suffering from heavy scale build up. Even with some means of water treatment employed, we return year after year to perform cleanings.

Following these observations, we have conducted intensive research and development to formulate a new kind of water treatment. A water treatment that would be cost effective, easy to use, and most of all reduce energy consumption by controlling scale, algae, foam and carryover.

TRAC H₂O™ is the result of this research. It is a multifunctional corrosion inhibitor destined to revolutionise the water treatment industry. Containing absolutely no solids, **TRAC H₂O™** will keep system TDS at a very low ratio, thus reducing energy and water costs.

Probably the single best characteristic of **TRAC H₂O™** is the amount needed to treat a system. Only .001% of the total system gallonage is needed to treat a system. In other words, a 500 gallon system would require 1/2 gallon of **TRAC H₂O™**.

Applications:

TRAC H₂O™ can be added manually or with an automatic metering system.

Manual Usage: Most communally used on closed loop systems, this would require regular maintenance to compensate for evaporation.

Metering system: This is the best method of injection. It allows for a precise control of the system's water and automatically compensates for evaporation.

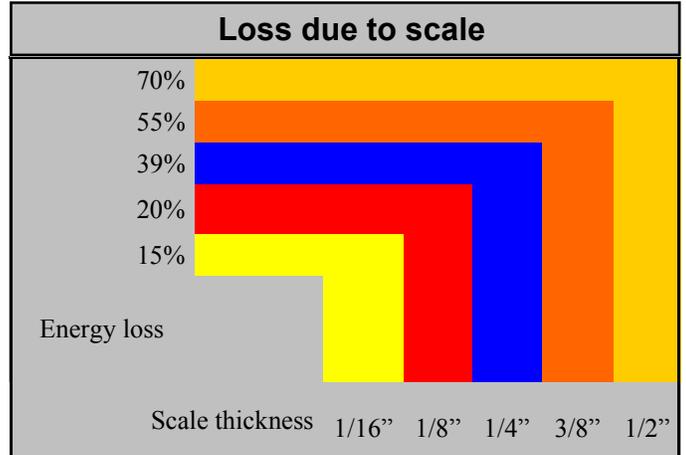

Availability

20 litre pail, 208 litre drum

Safety

- **TRAC H₂O™** is safe for your personnel.
- Based on current US EPA guidelines, **TRAC H₂O™** is classified as non-flammable and meets all requirements regarding hazardous and dangerous materials.

Advantages:

The bottom line is that the use of **TRAC H₂O™** will reduce water and fuel consumption by increasing water cycle efficiency and reducing boiler blow down intervals.

In addition TRAC H₂O™ is;

- ◆ Economical and simple to use.
- ◆ Retains lowest TDS readings in the industry.
- ◆ Prevents hard scale, soft sludge, & bacterial
- ◆ Eliminates storage of toxic materials.

TRAC's "Customer Advantage Plan"

Another industry first!!!

When using **TRAC H₂O™** managing you water system becomes easier then ever. No longer do you need a monthly service visit. Simply send us a sample of you system by using one of our prepaid sample bottles, and **TRAC** will take care of the rest.

FAST SAFE NON-TOXIC BIODEGRADABLE NON CORROSIVE NON HAZARDOUS
